They can also be developed and used in production environments. The APIs allow the developers to interact with the drawing, its content, and the parts contained in it. Language Support AutoCAD has implemented features such as Object ARX, Autodesk Exchange Apps, Visual LISP, VBA, and AutoLISP, to enhance its functionalities and increase the value of its installed base of users. Object ARX AutoCAD supports Object ARX, which is a C++ class library that allows the use of ObjectARX-based add-ons. Object ARX is also the base for a number of Autodesk products: AutoCAD Architecture, AutoCAD Electrical, AutoCAD Civil 3D and AutoCAD LT. These products are available through the AutoCAD Exchange App store. The first version of AutoCAD 2008 introduced Object ARX. Autodesk discontinued its use, as the ObjectARX language became replaced by Visual LISP. Autodesk Exchange Apps The Autodesk Exchange App store was launched in August 2011. It is a software development kit for creating Autodesk add-ons, which allows developers to interact with the application's drawing model and its content to create new, sophisticated, useful applications. App Store's services are based on a paid model, although it is possible to download some of the released products for free.
